

How to Install the UV Clarifier

Fitting your Pond Clear Advantage unit could not be easier. The unit is connected into the water circulation system as shown below and connected to a mains electricity supply in the same way as fitting a plug. Full instructions are enclosed with each unit.

What Size Unit ?

The main factors which govern the model you will need are pond size, flow rate, stocking level and the amount of sunlight the pond is subject to. Use the table below to select the correct model for your pond. If in doubt ask your dealer or telephone the Technical Advice number overleaf.

Pond Clear Advantage

Ultraviolet Pond Clarifiers

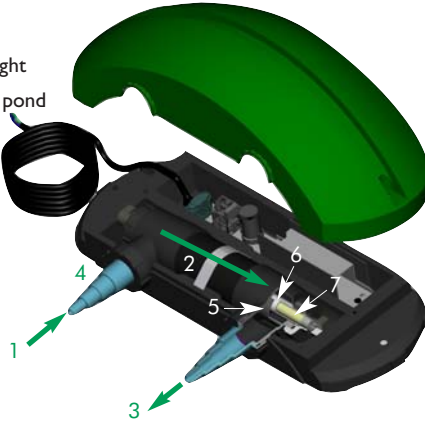

GUARANTEES CLEAR WATER

If installed in accordance with the manufacturer's instructions and the unit is the correct size for the pond capacity, pump size, stock level and situation

How do they work?

At the heart of each unit is an ultraviolet lamp housed within a quartz sleeve. As water is constantly pumped from the pond through the unit, the UV emitted from the lamp destroys the single-celled algae which causes the pond water to turn green. With constant use the pond water will remain crystal clear.

1. Green water enters unit
2. Water is treated by UV light
3. Treated water returns to pond
4. Multi-stage, translucent hoses show that UV lamp is working
5. UV shield
6. Quartz sleeve
7. High power UV lamp

UV Clarifiers - The Benefits

Clear Water

- No adverse effect on sensitive plant and pond life.
- As no chemicals or other environmentally harmful processes are used, there is no danger of pollution or over-treatment of the water.

Clear Water

Pond Clear Advantage ^{CE}

Easy to Install

Easy to Use

Easy to Maintain

Features

- Robust construction and new ergonomic, green and black design.
 - Surface, filter or wall mountable and supplied with a wall mounting kit and a filter lid fixing kit.
 - Four-stage hoses designed to take flexible hose from 1/2" to 1 1/4". Hoses are held in place with screw on collars, allowing the disconnection of the hose, leaving the unit or the hose in situ for ease of servicing and maintenance.
 - Rigid pipe adaptors, for connection to 40mm solvent weld rigid pipe, are included with the unit. These adaptors are held in place with screw on collars, allowing the disconnection of the rigid pipe, leaving the unit or the rigid pipe in situ for ease of servicing and maintenance.
 - Easy access to working parts making maintenance quick and easy.
 - Supplied with a 5 metre power cable.
 - Complete with comprehensive instructions and backed up with full technical support from TMC.
 - Full 36 month guarantee against any defect or failure. This covers all parts and labour.
- This unit is manufactured and conforms to BS EN 60335-1 and BS EN 60335-2-55.*
- This unit conforms to the low voltage directive (safety) CEE 73 23.*
- This unit conforms to the EMC directive CEE 89 336.*
- This unit is CE approved.*

Units Available

UV8 - Suitable for ponds up to 1200 UK Gal (5400 litres/ 1440 US Gal) with a maximum flow rate of 600 UK Gal (2700 litres/720 US Gal) per hour

UV15 - Suitable for ponds up to 3000 UK Gal (13500 litres/ 3600 US Gal) with a maximum flow rate of 1500 UK Gal (6750 litres/1800 US Gal) per hour

UV25 - Suitable for ponds up to 4000 UK Gal (18000 litres/ 4800 US Gal) with a maximum flow rate of 2000 UK Gal (9000 litres/2400 US Gal) per hour
